I help startups hire great remote engineers | Founder @ Remote Crew

Lisboa, Lisboa, Portugal

Resumo

I founded Remote Crew to help startups build remote tech teams with top-tier talent

Here's how we make it happen:

1## We source and vet the best remote developers globally.

2## We match talent to your exact needs and company culture.

3## We support you with seamless team integration.

Most companies struggle to find and manage high-quality remote talent.

What's wrong with that?

1## You waste time filtering through unqualified candidates.

2## You risk hiring people who don't fit your company's culture or work style.

And both of these slow down your ability to grow.

What's the alternative?

Remote Crew solves these problems with a refined hiring process that lets you:

1. Access a global pool of pre-vetted, highly skilled tech talent.
 2. Ensure every new hire fits seamlessly with your culture and goals.
 3. Scale your team confidently with our ongoing support.
